The Good	The Bad	The Bottomline
a few tools which are easy in its use / easily make a new alphabet / easily export your font	You can only make an alphabet in the given grid / Because of the grid there are not so many options to really make a font. Only experiment with the given forms and grid	It's an easy font tool for beginners who want to create an experimetnal font. But for designers to make a really readable letter it won't work

Testing the tool (learning by doing — trial and error) What would/could a designer use this tool for?

Experiment for first font ideas in a grid.

Depending on what kind of free this tool is, how "free" is this tool really?

while using the app I didn't see any annoying advertisement. As far as I know it's free.
