The Good	The Bad	The Bottomline
You can edit or design a font. You have a baseline/left and right side/ capheight so you don't have to worry about where you place it.	It needs a lot of practice to really make what you want. It's not very easy to use.	It is very useful for designers, because they can design their own font.

Tasting the tool (learning by doing — trial and error) What would/could a designer use this tool for?

Edit and creating a font

Depending on what kind of free this tool is, how "free" is this tool really?

There are no ads, or surveys etc. On the webpage there is only a link to give a donation, but that's not put in your face. So it's really free.
